

CURVEGRID PARTNER TRACK — RWA TOKENIZATION

# A receivable that lives and dies on-chain.

**Seikyu is a marketplace for unpaid invoices.**

A business gets paid today; an investor buys the  
debt at a discount and collects in full on the due date.

One ERC-721 per invoice — minted at listing, transferred once, burned at settlement.

**seikyu.xyz**   Live on Sepolia

## THE PROBLEM

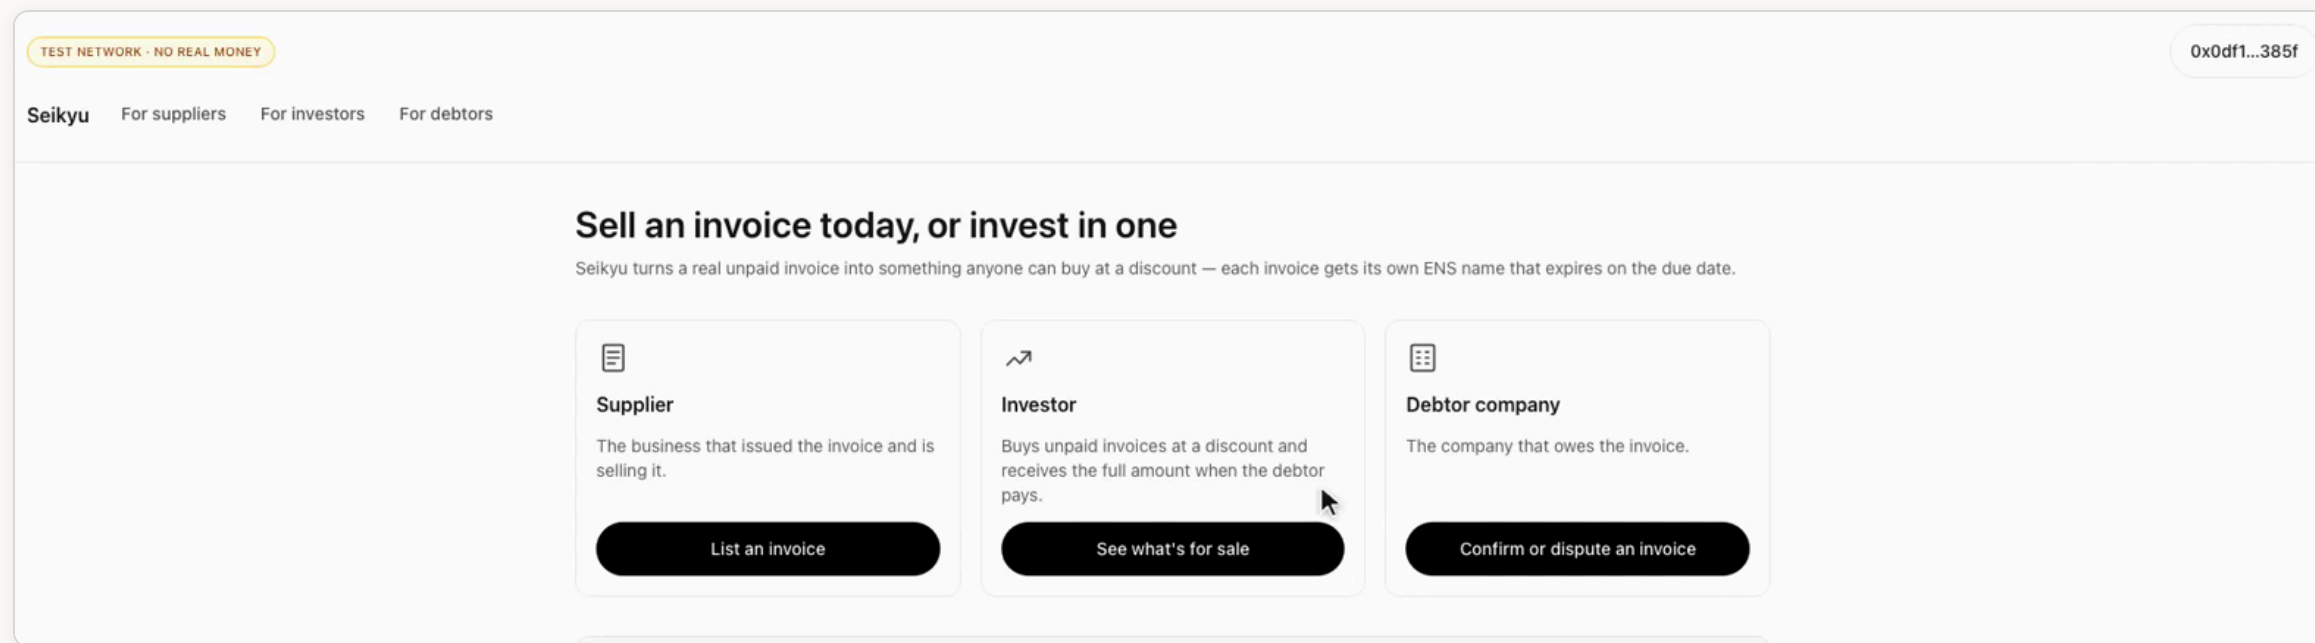

**The work is done.  
The money is 60 days away.**

- A supplier delivers today and is paid in **60 to 90 days**
- That receivable is a real asset, and it sits in a spreadsheet
- A spreadsheet row can be sold twice, and the buyer cannot audit it

## THE SOLUTION

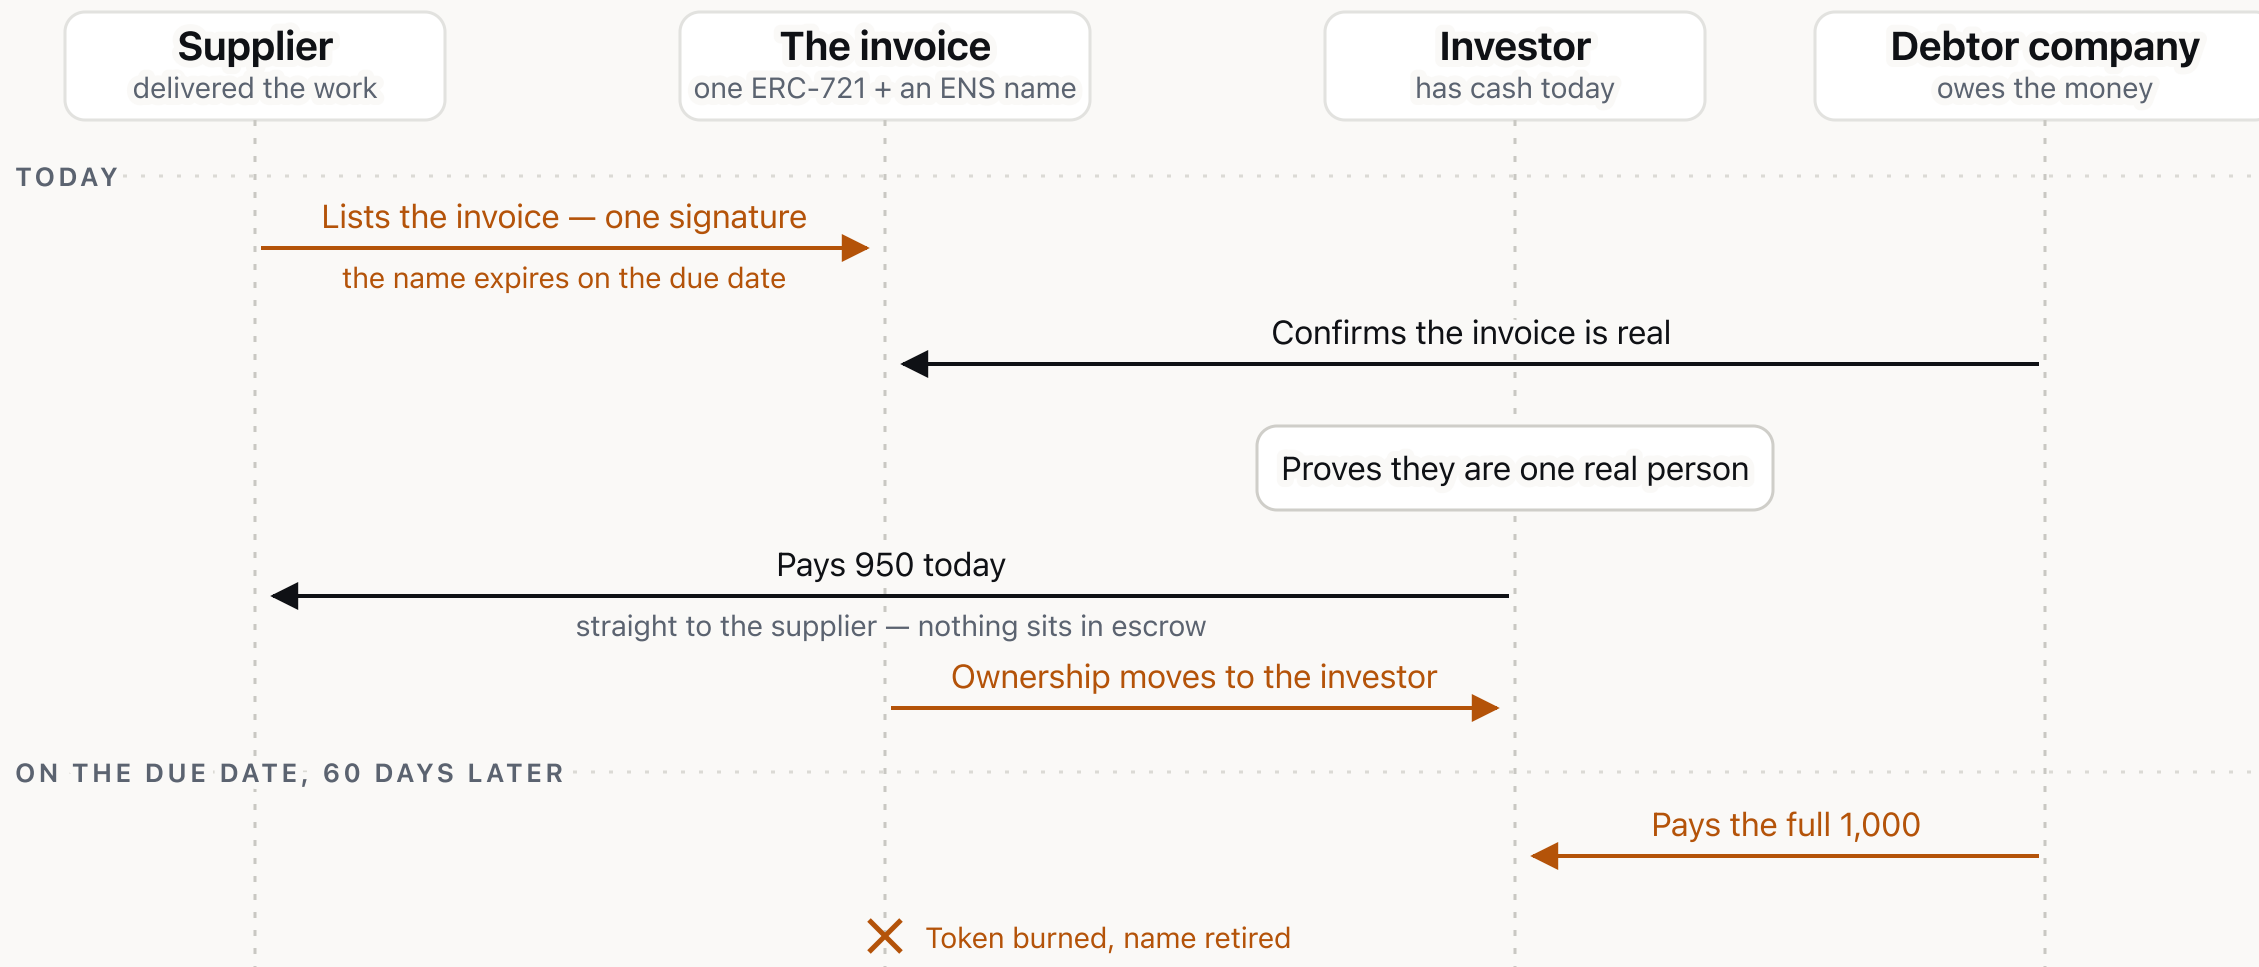

# One token per invoice, for the whole life of the debt

- Minted when the supplier lists it · transferred exactly once, to an investor the contract has checked · burned the moment the debtor settles

## HOW IT WORKS

# The life of one receivable

## THE ASSET

# The listing lives on-chain, not in a database

- One ERC-721 minted when the supplier lists it
- Self-held by the market contract:  
`_mint(address(this), id)`
- Burned the instant the debtor settles

### List an invoice for sale

Fill in who owes you and how much. Seikyu creates the invoice's ENS name and puts it up for sale at your discount. Investors are paid the full amount by the debtor on the due date.

Debtor address (Debtor company)

0xb6359D76E104a9fF007c979d5b18b2804578E72B

Debtor accounts-payable address (Debtor's accountant)

0xe1D7a4149630058dCeecA0da42a50A3FFF7d9aDe

The wallet that may confirm or dispute this invoice on the debtor's behalf.

Face value (test USDC)

1000

Discount %

5

Investor pays 950 test USDC now for 1,000 test USDC at maturity.

Due date

☒ +7 days ☐ +30 days ☐ +10 minutes (quick demo) ☐ Custom

Issue invoice

## THE CONTROLS

# Programmable rules live in the transfer itself

- Every transfer runs through ERC-721's `_update` hook
- Rejects investors who haven't passed World ID
- Caps each person at 3 open invoices; mint and burn are exempt

### inv-15.seikyu.eth

Invoice ID — an ENS name that stops resolving when the invoice is paid, withdrawn, or expires.

This app uses test money on a test network — nothing here has real value.

You're viewing as an investor. Buying requires a one-time one-person check.

[Debtor's accountant? Confirm or dispute this invoice →](#)

Sale price 950 test USDC (5.0% discount)

Step 2 of 2 — pay 950 test USDC to the supplier now; you'll receive 1,000 when the debtor pays

Buy for 950 mUSDC

► TECHNICAL DETAILS (ENS)

## NO ESCROW, EVER

# 950 now, instead of 1,000 later

- `buy()` sends the price straight to the supplier
- `settle()` pays the current owner in full
- One tx pays, burns the token, retires the ENS name

Paid in full.

[Debtor's accountant? Confirm or dispute this invoice →](#)

This receivable has been settled in full.

TECHNICAL DETAILS (ENS)

## THE STATES

# Six states — four on-chain, two derived

- Listed, Funded, Paid, Cancelled are written on-chain
- Overdue and Expired-unsold are derived from the due date
- Marking overdue extends the ENS name 30 days

WHAT WE'D TELL CURVEGRID

# Verifiable on-chain, honest about the gaps

- 46 Foundry fork tests run against a pinned Sepolia block
- All three contracts are Sourcify exact-match verified
- The full issue-to-settle lifecycle ran live on Sepolia for the demo

InvoiceMarket `0x9Cf9989AfC0196720aa0A64F61a614CFB548B875` · InvoiceRegistrar `0x628701e9A322B019e4aFe31A077f393644D748eF` · mock USDC  
`0x6B41ADF3e9A858136C28dfAC2432Eb2356E5451D`

MultiBaas note: evaluated for the invoice feed, cut to hit the time-box. The app reads chain state over plain RPC — the README says so. A 15-minute Sepolia ERC-721 event quick-start with a Next.js example would change that.
