

Seikyu on ENSv2

Every invoice is an ENS name whose expiry is its due date.

Built for the ENS team, from the inside of ENSv2.

Sepolia · **sepolia-deployment-2026-09-15** · **seikyu.eth**

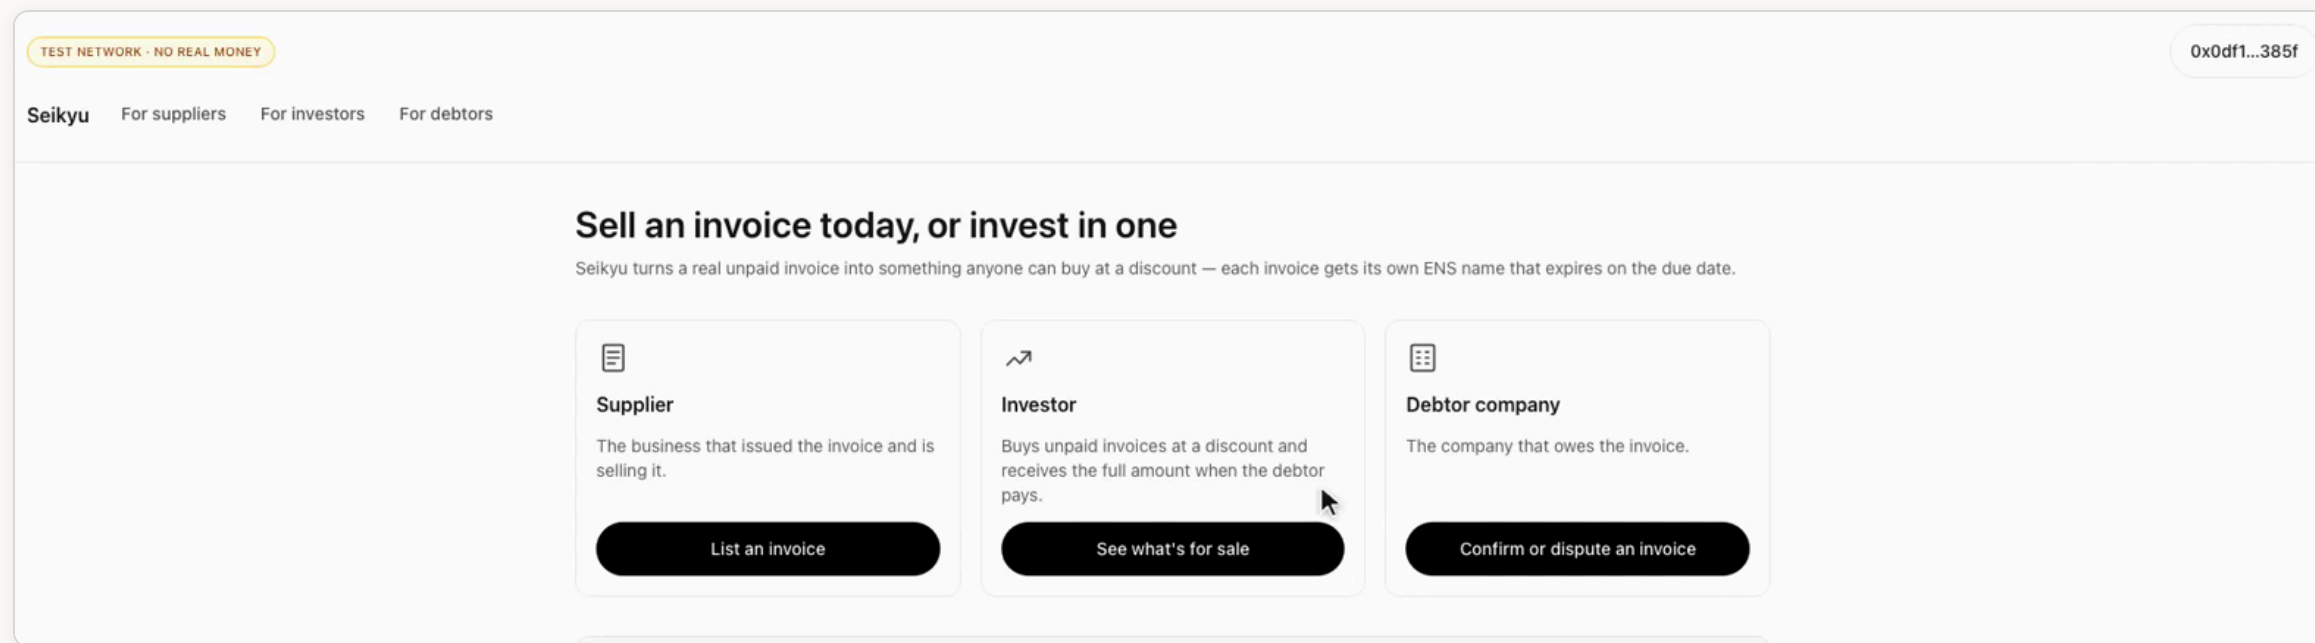

**The work is done.
The money is 60 days away.**

- A supplier delivers today and is paid in **60 to 90 days**
- Nobody else will buy that debt, because nobody outside the deal can check it
- The due date is a column in someone's database — it expires nothing, and it gates nothing

THE SOLUTION

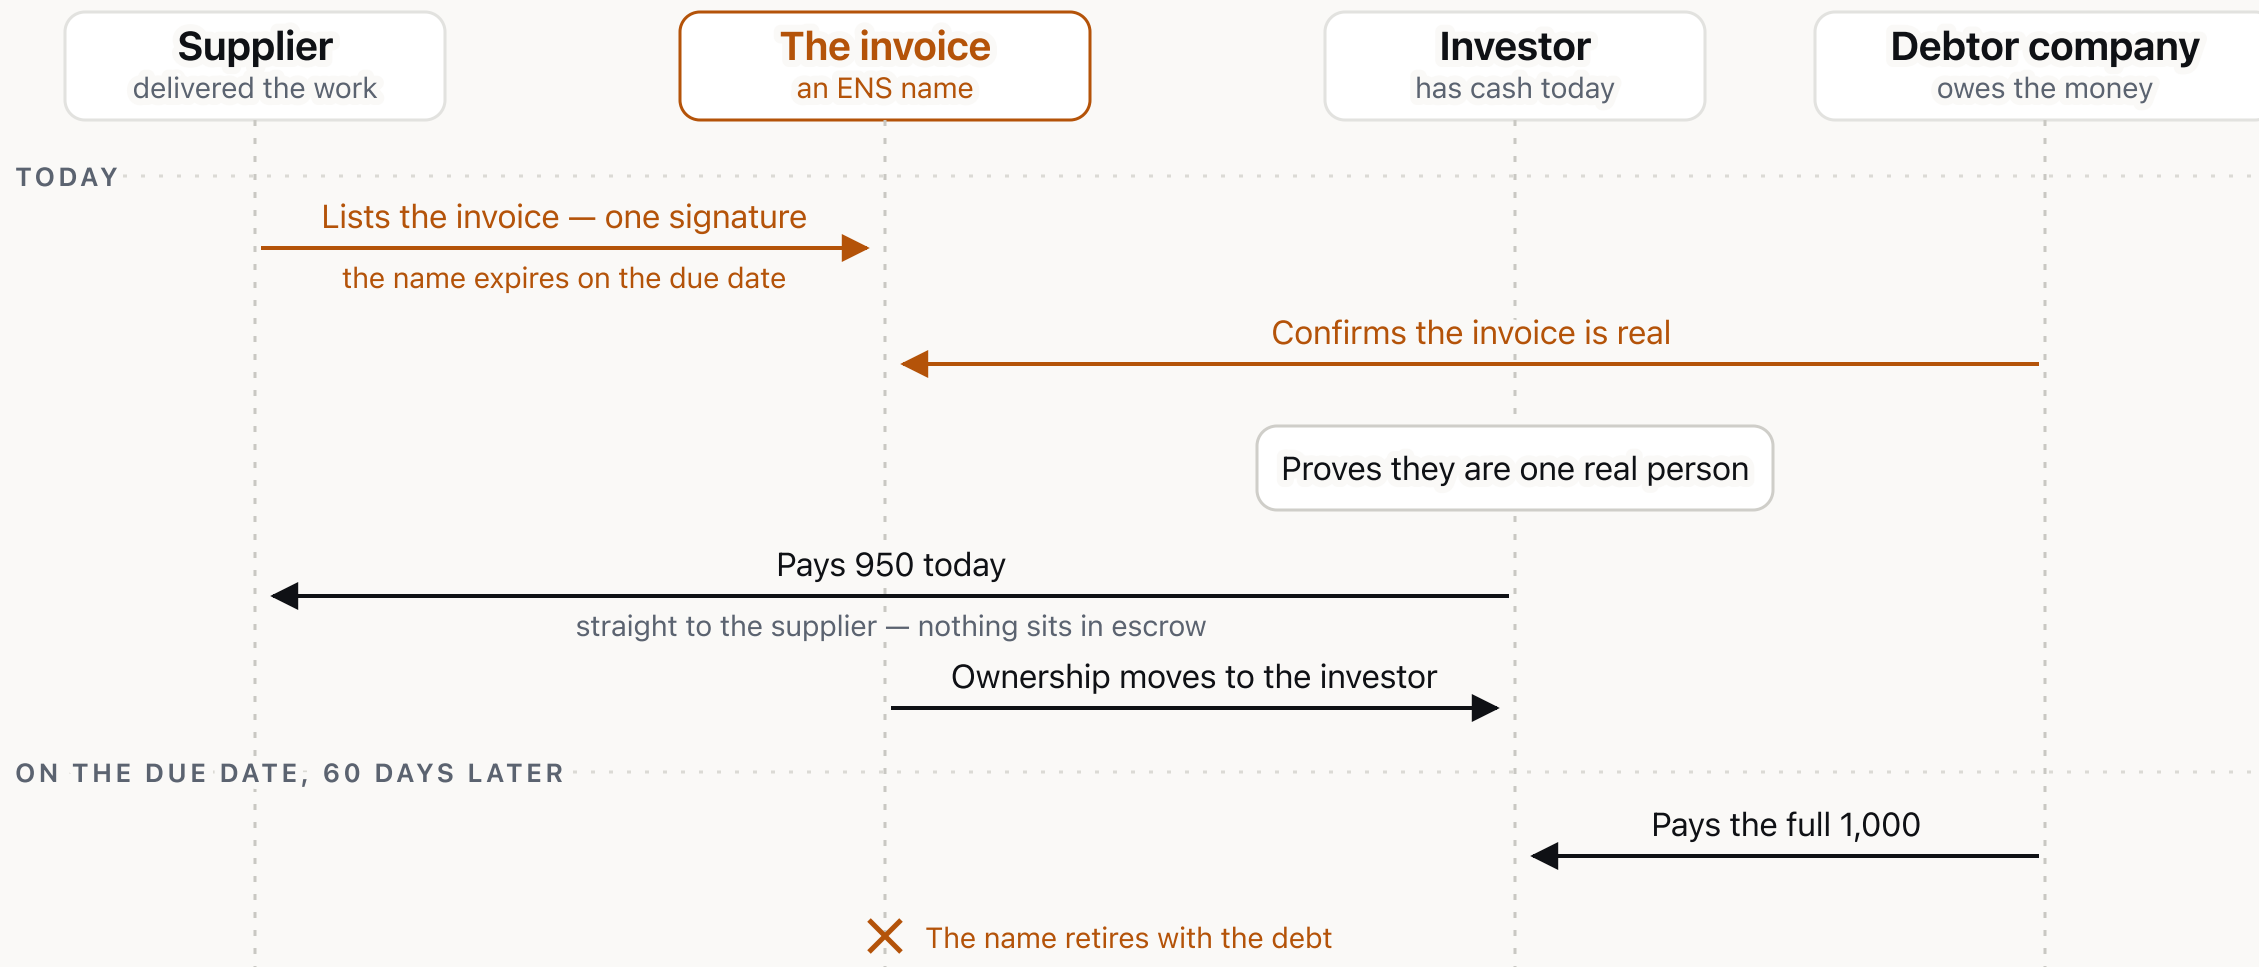

The invoice *is* the name, and the due date *is* the expiry

- Eight text records anyone can read without an account · the debtor's accountant confirms the debt on-chain · the name stops resolving the day the debt falls due

HOW IT WORKS

Where the name lives and dies

Expiry is an economic primitive, not a label

- Pinned to `sepolia-deployment-2026-09-15`; `main`'s API differs from what's deployed
- Own `UserRegistry` via `VerifiableFactory`, under `seikyu.eth`
- `inv-15.seikyu.eth`'s expiry equals the invoice's due date, exactly

inv-15.seikyu.eth

Invoice ID — an ENS name that stops resolving when the invoice is paid, withdrawn, or expires.

► TECHNICAL DETAILS (ENS)

A CONSTRAINT WE HIT

One resolver per invoice — by force, not choice

- Setter roles are scoped by `keccak256(key)`, never by name
- Debtor write-access to `ack` alone needs its own resolver
- Eight text records per invoice, resolver address included

Confirm the debt, touch nothing else

- Debtor's AP wallet holds an EAC role scoped to `ack` alone
- Editing the amount reverts:
`EACUnauthorizedAccountRoles`
- Confirming `ack` flips the badge to "Confirmed by debtor"

Debtor's accountant — confirm or dispute an invoice

You're acting for the company that owes this invoice. Confirming or disputing writes the debtor's response onto the invoice's ENS name; the supplier and investors see it immediately, and a disputed invoice can't be bought.

Connected wallet: 0xe1D7a4149630058dCeecA0da42a50A3FFF7d9aDe
Only the debtor's accountant wallet named when the invoice was issued can write ack. Connect it using the button in the header.

amount: Blocked as designed: reverted with EACUnauthorizedAccountRoles — this wallet's EAC role is scoped to "ack" only.

A disputed invoice cannot be bought

- `InvoiceMarket.buy()` checks `REGISTRAR.isLive(id)` before moving money
- Refuses outright when the debtor's `ack` reads `disputed`
- ENS state gates the money — not application logic

This app uses test money on a test network — nothing here has real value.

You're viewing as an investor. Buying requires a one-time one-person check.

Debtor's accountant? [Confirm or dispute this invoice →](#)

The debtor disputed this invoice, so it can't be bought.

▸ TECHNICAL DETAILS (ENS)

TWO INDEPENDENT READ PATHS

The name retires; the record doesn't

- `closeInvoice` pays the investor, burns the token, unregisters — one tx
- Liveness reads the registry; records read the resolver cached at registration
- Registry returns `address(0)` once expired — the cache keeps records alive

Invoice ID — an ENS name that stops resolving when the invoice is paid, withdrawn, or expires.

WHAT WE'D TELL THE ENS TEAM

The deploy tag should be the docs entry point.

Key-scoped setter roles deserve a prominent note — it drove our whole resolver-per-invoice design. The missing `text()` getter forces resolve + multicall. And `renew` reviving an expired name's storage is useful, though undocumented.

UserRegistry `0xA9DFC9d1D5EA96b5Ade09d0E9B84944965B4eD67`

InvoiceRegistrar `0x628701e9A322B019e4aFe31A077f393644D748eF`
