

WORLD PARTNER TRACK

Buying a receivable requires one real human.

IDKit 4.3 · Proof of Human preset, legacy v3
proofs allowed for the demo

seikyu.xyz World ID gates every purchase

**The work is done.
The money is 60 days away.**

- A supplier delivers today and is paid in **60 to 90 days**
- The fix is to let a stranger buy that debt at a discount
- But one stranger with fifty wallets is not fifty buyers — and any per-person limit is theatre

THE SOLUTION

Anyone can buy an invoice — once they prove they are one person

- Each invoice becomes an ENS name anyone can read, confirmed on-chain by the debtor's own accountant · each buyer clears World ID once, and that human is capped at three open invoices

Where World ID sits in the deal

STEP 2 — BUY

The client opens IDKit before checkout

- IDKitRequestWidget, IDKit 4.3
- Preset: Proof of Human, legacy v3 allowed
- Passport is the credential we designed around

inv-15.seikyu.eth
Invoice ID — an ENS name that stops resolving when the invoice is paid, withdrawn, or expires.

STATUS	DEBTOR'S RESPONSE
For sale	No response yet

Amount owed 1,000 test USDC	Sale price 950 test USDC (5.0% discount)
Due Oct 4, 2026, 00:53 JST — due in 6 days	Supplier 0x0df1...385f
Debtor company 0xb635...E72B	Current owner — not sold yet

This app uses test money on a test network — nothing here has real value.

You're viewing as an investor. Buying requires a one-time one-person check.
[Debtor's accountant? Confirm or dispute this invoice →](#)

One-time one-person check (World ID) — proves you're a real person; you do it once, at your first purchase.

Verify with World ID

▸ TECHNICAL DETAILS (ENS)

We verify before we forward

- We hash the signal ourselves with idkit-core's `hashSignal`
- Compare it to `responses[0].signal_hash`
- World's `/api/v4/verify` never checks the signal — no hash fails closed

TWO MORE CHECKS, SERVER-SIDE

Credential and environment, matched exactly

- Legacy proof reports `identifier: "orb"`, not `proof_of_human`
- We match it to our configured preset anyway
- Response `environment` must match what the widget requested

ON SUCCESS

One nullifier, one wallet, forever

- Operator wallet relays `setVerified(investor, nullifier)` on-chain
- The nullifier binds permanently to the first wallet that uses it
- Cap of 3 open invoices lives in the ERC-721 `_update` hook, not the UI

FAILURE STATES — ALL REAL, NOT MOCKED

Every rejection is a real response

- Cancel is recoverable — the panel offers Retry
- Reused World ID from another wallet → 409
NULLIFIER_ALREADY_USED
- Signal that doesn't match the wallet → 422
SIGNAL_MISMATCH

► TECHNICAL DETAILS (ENS)

WHAT WE'D TELL WORLD

Verified live, with feedback worth acting on

- `/api/v4/verify` silently ignores the signal — worth stating in the docs
- Staging token only comes from the Portal's MCP endpoint, expires in 24h
- Simulator's default mode shares one nullifier across all 5 test identities

Wallet `0x1de375E3B8Bbb7dF74E927Ca481414843A2Bbe49` verified with Simulator identity #3 — `InvestorVerified` tx `0x5401e699...5132` on Sepolia, `isVerified` now true.
